

NEON® ONE | NODE**Item number: 162000K****General description**

The NEON® ONE | NODE is a high-precision sensor interface module designed for analogue-to-digital signal conversion within the NEON® ONE platform. It ensures stable measurement transmission over long distances with digital signal processing and features self-supervised electronics for increased reliability. A built-in status LED enables quick troubleshooting, simplifying maintenance.

Technical specification

- Connection type
- M12 4-pin D-coded (male)
 - Snap-in 8-pin
